# ANU BILEGDEMBEREL

**PRODUCT ENGINEER | SPEED-DRIVEN, DATA-INFORMED | FULL-STACK & UX-FOCUSED**

+1 6576826522 | anu.bn@yahoo.com | anubilegdemberel.com | github.com/nukktae

> **Product Engineer bridging product strategy, UI/UX, full-stack software, and hardware systems. With a background in Software Engineering and Marketing, I translate user and business needs into scalable MVPs across web, mobile, IoT, and embedded systems fast iterating on real-world feedback.**

## SELECTED EXPERIENCES

**UIUX Designer & Front-end Developer** — **Manhattan, CA**
Bestia Group LLC — 09/2025 — 01/2026

- Identified usability issues in an early-stage U.S. real estate agent platform through agent interviews, defining UX improvements focused on simplifying complex workflows
- Led workflow-driven UI/UX design and React.js frontend implementation for the Bestia LeadBoard Lite demo at LA Tech Week, ensuring clarity and stability for investor-facing presentations
- Optimized responsive React interfaces and component structure, reducing onboarding time and improving accessibility for agents aged 40+, contributing to 300+ pre-signups and ~50 hours of annual time savings per agent

**UIUX Designer** — **Torrance, CA**
Handiers Inc. — 03/2025 — 09/2025

- Resolved UI inconsistency and broken user flows across two mobile apps and a marketing site by leading frontend architecture, design system setup, and component standardization
- Led a core UX redesign (chat, booking, quote requests), designing in Figma and implementing in Flutter with frontend–backend integration to improve usability and real-time interaction stability
- Managed feature priorities via Jira and collaborated cross-functionally on real-time features (camera input, AI quotes), balancing technical constraints and user value to deliver a stable production release

## SELECTED PROJECTS

**Product Engineer** — **Seoul, South Korea**
Shinhan Scholarship Foundation — Applied Project — 01/2026 — Present

- Led a client-facing product project to resolve manual monthly student report submissions, reducing operational burden while increasing platform engagement and brand usage
- Conducted constraint-aware user research using web crawling, secondary data analysis, and data visualization due to interview sensitivity, then drove ideation using the SCAMPER method
- Designed student-facing features (community, networking, recurring activity reporting) and a lightweight admin CRM dashboard for faster student management and oversight
- Collaborated across frontend and backend teams to deploy and iterate a PWA, integrating client feedback post-launch and achieving ~3 hours of backend processing time savings

**UX Engineer & Hardware Engineer** — **Seoul, South Korea**
COCO AI Educator Robot — 11/2025 — Present

- Built an AI companion robot with ESP32-based embedded architecture, integrating firmware, cloud AI inference, and a web-based control interface
- Implemented real-time voice interaction using I2S audio pipelines and cloud AI APIs, achieving <1.8s average response latency under live network conditions
- Integrated 9+ hardware components (sensors, motors, OLED display, camera, audio modules) with optimized power management, achieving 99.6% Wi-Fi reliability and stable operation in extended stress tests
- Designed emotion-aware hardware UX, including 12 expressive OLED facial states and proximity-triggered interactions, improving perceived responsiveness and user engagement

**UIUX Designer & Full Stack Developer** — **Seoul, South Korea**
Friendly — 09/2026 — 12/2025

- Identified a major pain point in credit and graduation planning for double majors, minors, and international students due to university-specific requirements
- Conducted in-depth interviews and surveys with ~80 students, confirming that ~98% struggled with credit planning and time management, and used findings to define the core product scope
- Led product strategy through SWOT analysis, MVP wireframes, and UX design, collaborating across frontend and backend teams and integrating ~124 API endpoints with AI fine-tuning for accurate guidance
- Deployed the app to the App Store, iterated on post-launch fixes, and launched a landing page with a waitlist of 120 early users

**UX Engineer & Front-end Developer** — **Irvine, CA**
Rootin — 09/2024 – 03/2025

- Identified usability and trust issues in an IoT mobile product through in-depth interviews with California-based users and real-world usage flow analysis
- Designed BLE connection failure and latency UX exception cases, implementing real-time status feedback UI to reduce user confusion and improve reliability perception
- Planned and tested Firebase Cloud Messaging notification flows, achieving 95% alert delivery reliability through iterative timing and frequency optimization
- Built a Flutter-based MVVM architecture with reusable components, enabling A/B testing, multilingual support, and scalable UX improvements across iOS and Android

**Backend Developer, AWS System Architect** — **Irvine, CA**
RealMo Moderation system — 09/2024 — 12/2024

- Designed a real-time content moderation system using AWS Kinesis, Rekognition, and Lambda, achieving ~95% accuracy and ~20% fewer false positives under peak streaming traffic
- Built a low-latency, cost-optimized moderation pipeline, analyzing throughput, compute usage, and streaming costs to improve scalability while reducing infrastructure overhead
- Conducted UX and system case studies on large streaming platforms (Twitch, AfreecaTV, SOOP Korea, Chzzk) to identify moderation pain points, latency constraints, and UX–cost trade-offs in live streaming environments
- Presented AWS-based cost-reduction and system architecture proposals in a technical presentation in California, focusing on maintaining real-time UX while optimizing moderation accuracy and operating costs

## LANGUAGES

Mongolian(Native)
English(C2)
Korean(TOPIK6)
Chinese(HSK5)

## SKILLS

· HTML5, CSS3
· React.js, Tailwind CSS
· Vue.js, Javascript
· Angular, Flutter
· TypeScript, Three.js
· Node.js, Express.js
· Django, Spring Boot
· Flask, RESTful APIs
· Firebase, PostgreSQL
· dynamoDB, MySQL
· Figma, Canva
· AWS, Docker
· TensorFlow.js, OpenAI
· Scrum, Team Collab

## EDUCATION

**Software Engineering, B.S**
**Double Major: Marketing**
Kookmin University
03/2023 — 12/2026

## OTHER ACTIVITIES

**Research PBL**
Irvine, CA, USA
09/2024 – 02/2025

**Reporter, Kookmin Review**
03/2024 – 09/2024

**Student Council Int.**
06/2023 – 09/2024
